

wake.

A Glance-inspired design system

A working design system reverse-engineered from the public design language of Glance — its lock-screen immediacy, media-led layout, "starring you" personalisation and one-tap commerce — rebuilt as principles, tokens, components, patterns, screens and slides you can reuse for a product case study.

01 Research & principles

14 sources, every claim classified, ten principles.

03 Components & patterns

Six card anatomies, modules, navigation, overlays, eight UX patterns.

02 Foundations

Colour, type, space, grid, icons, imagery, motion.

04 Screens, case, code

16 screens, a grounded travel assistant, CSS and deck assets.

Not affiliated with or endorsed by Glance or InMobi. The Glance name and logo are trademarks and are not used as design primitives; "wake" is an original placeholder wordmark. All artwork is original. Type: Inter and Instrument Serif (SIL OFL).

How this was made

Every characteristic is classified. Only what a public source states is marked observed; the production CSS, fonts and screenshots could not be inspected from the build environment.

CONFIDENCE NOTATION

- Observed — stated or described in a public source
- ⦿ Strong inference — follows directly from observed behaviour
- Reconstruction — a system value chosen to fit the observed language
- ◇ Original interpretation — added by this system; not claimed to exist in Glance

METHOD

1 · Collect public sources · 2 · Extract and classify characteristics · 3 · Validate principles against evidence · 4 · Reconstruct tokens around two observed hues · 5 · Generate every artefact from one token source.

LIMITS

Two colour values are observed (via a brand registry). No spacing, radius, type or motion value is claimed as observed. Glance differs by market; the source of each observation is named.

ID	SOURCE	TYPE	WHAT IT ESTABLISHED
S1	Glance homepage	Primary	Taglines ('Glance it. Shop it.', 'Shopping that Understands You'), single 'Download The App' CTA, dark hero-first layout, sections for AI agents.
S2	Glance · About us	Primary	Agentic commerce positioning; surfaces: lock screen, app, connected TV, brand sites; 'Shopping, minus the heavy lifting'; US MAU claims.
S3	Brandfetch · glance.com	Secondary (brand registry)	Brand colours #FF0049 / #FC034D (red), #DDBEF0 (lavender), #000000. No font listed.
S4	TechCrunch · Glance launches gen-AI shopping on the lock screen (Feb 2025)	Secondary (press)	Selfie-based avatar; outfits on the lock screen; CEO: like a fashion magazine where you are the model; tap reveals products from ~400 partners.
S5	Android Central · Glance AI lock-screen visuals	Secondary (press)	Save / share / set as wallpaper; one tap to explore looks and products; 1.5M active users in US trials, half returning weekly.
S6	Forbes · Glance AI and Samsung (Jun 2025)	Secondary (press)	Opt-in; 'you're reacting to an image of yourself'; purchase from the screen; seasonal and limited-time highlights.
S7	Glance press release · AI-native commerce platform	Primary	Three-model architecture; looks styled on the user; save/share/wallpaper; plans to expand to beauty, accessories and travel.
S8	App Store · Glance – My Personal Shopper	Primary (store listing)	Personalised feed, moodboards, shoppable collections by colour/style, chat to refine, weather/trend/occasion awareness, Siri entry, home-screen widget.
S9	Google Play · Glance – Shop with AI	Primary (store listing)	'Styled around you'; editorial-quality imagery 'starring you'; reviews complain about forced installs and hard-to-remove behaviour.
S10	Google Play · Glance AI Lockscreen	Primary (store listing)	AI Looks, live widgets (weather, steps), curated news and scores 'without even unlocking your phone'.
S11	InMobi · Partner with Glance	Primary (advertiser page)	Ad formats: Impact (full-screen imagery), Engagement (video, interactive), Promotion (one-click installs); content before unlock; ~200M Indian users.
S12	9to5Google · Glance lock screen in the US (Apr 2024)	Secondary (press)	Persistent news widget with category tags; weather appears when conditions change; full-screen prompts to re-enable.
S13	Medium · Samsung Glance news stories	Tertiary (blog; lower reliability)	Horizontal swiping between stories; ~10 category tabs starting with 'For You'; 'catch up in seconds'.
S14	Glance blog · Smart AI shopping platform features	Primary (company blog)	Natural-language + visual search; feeds from saves and dwell time; context-aware (time, location, events); fit-confidence percentages; single-tap checkout.

Design language analysis

Glance is a wake-first product. Everything follows from the two seconds after a screen lights up.

CHARACTERISTIC	FINDING	CLASS	SOURCE
Surface	Lock screen first; app, TV, brand sites	● Observed	S2, S11
Canvas	Dark marketing site; black in palette	⦿ Strong inference	S1, S3
Brand colour	Hot red #FF0049	● Observed	S3
Secondary	Lavender #DDBEF0	● Observed	S3
Imagery	Full-screen imagery and video formats	● Observed	S11
Likeness	AI images of the user wearing products	● Observed	S4–S7
Copy	Two-verb brand line; short CTAs	● Observed	S1
Framing	'A fashion magazine where you are the model'	● Observed	S4
Interaction	One tap from lock screen to content or product	● Observed	S5, S11
Navigation	Topic tabs from For You; horizontal swipe	● Observed	S13
Personalisation	Saves, dwell, weather, trends, occasions, time	● Observed	S8, S14
Utility	Weather, steps, scores widgets	● Observed	S10, S12
Trust	Reviews complain about forced installs, re-enable prompts	● Observed	S9, S12
Type, radius, spacing, motion	Not identifiable from sources	○ Reconstruction	—

DIFFERENT FROM UTILITY-FIRST APPS

The first screen is not the app. Content arrives on a screen nobody opened on purpose, so value must be instant and dismissal cheap.

Browsing is the job. Discovery is the product, not the path to it.

The user is the model. Personalisation shows up in the image, not only in the ranking.

Commerce is one tap from inspiration.

WHERE THIS SYSTEM ADDS SOMETHING ◇

Public reviews show frustration with control. The system adds visible reasons ("Why this"), editable inferred interests, a delete control for likeness, "Sponsored" badges, and freshness stamps on any volatile fact.

Design principles · 1 of 2

Ten principles validated against the source log. Each has a reason, a behaviour, a do, a don't, and a confidence mark.

01 ● Observed Wake-first Every surface must deliver its value in the first two seconds, before a tap and ideally before unlock. Why Glance's origin is the lock screen: content that reaches people 'before they unlock the phone', with one-click engagement. Sessions are glances, not visits. Do Write headlines that stand alone. Put the answer, not the teaser, in the hook. Don't Don't require a tap to understand what a story is about. Don't put two competing CTAs on a hook. e.g. Lock-screen story: 'Monsoon's over. Six beaches worth a long weekend' + Explore.	02 ● Observed Media is the layout Images and video are structural elements, not decoration around text. Why Glance's products are visual first: full-screen 'Impact' formats, AI-generated looks 'starring you', video and live formats. Do Crop for a focal point in the upper-middle third. Use a scrim under every overlaid word. Don't Don't box media inside padded cards. Don't use stock imagery that could belong to any app. e.g. Hero card A: 4:5 image, scrim-bottom, headline-media on top.	03 ● Strong inference One hook, one action A surface makes one promise and offers one obvious next step. Why The brand line is literally two verbs ('Glance it. Shop it.'). Short sessions punish choice. Do Name the action with a verb and its object: 'Plan a trip', 'Book at ₹5,842'. Don't Don't stack primaries. Don't use red for anything that isn't the action or live. e.g. Product detail: one 'Buy on Northline' button; save is an icon.	04 ○ Reconstruction Red means now, lavender means you Colour carries meaning: signal red for action and live, iris lavender for personalisation. Why The observed brand uses a hot red (#FF0049) with a lavender secondary (#DDBEF0) on black. Giving each a job keeps a loud palette calm. Do Budget the red to about 0.5% of the screen. Use iris for every 'because you...' line. Don't Don't use red for errors (use orange-red with an icon). Don't use iris decoratively. e.g. Recommendation card E: iris reason chip; hero card: red Plan a trip.	05 ● Observed Starring you Personalisation is shown in the content itself, not described in settings. Why Glance AI's core idea is 'you are the model on each page': looks rendered on the user's own image, feeds tuned to weather, trends and occasions. Do Show the personal detail that made the pick. Let people remove inferred interests. Don't Don't claim to know identity ('Because you are...'). Don't hide the off switch. e.g. Commerce feed: 'Starring you' badge; For you feed: 'Because you saved Goa'.
---	---	---	---	---

Design principles · 2 of 2

Principles six to ten. Nine and ten are original: they are what the observed language needs to be trustworthy.

06

● Observed

Discovery over navigation

People find things by scrolling a tuned stream, not by opening menus.

Why Lock-screen news is a swipeable playlist with topical tabs starting at 'For You'; the app replaces 'manual searching and scrolling' with AI-led discovery.

Do Keep 'For you' first. Make every rail peek at 40% so it reads as scrollable.

Don't Don't add a hamburger menu. Don't auto-scroll rails.

e.g. Home: tabs → hero → reason rail → trending.

07

● Observed

Context is a primitive

Time, place, weather and occasion are inputs to layout, not afterthoughts.

Why Glance describes feeds that shift with 'the weather around you, what's trending' and time of day (gym wear at 7am, loungewear at 7pm).

Do Put context in metadata. Insert utility modules on change, not on a schedule.

Don't Don't show a weather widget on every screen. Don't hard-code a morning layout.

e.g. Look card: 'Saturday brunch · 26°'. Fare alert only when the saved route drops.

08

○ Reconstruction

Dense, not cluttered

Carry a lot of content with strong hierarchy and few visual devices.

Why A feed with news, video, looks and products in one scroll only works if each unit is instantly legible.

Do Use one metadata line with middle dots. Cap text on cards at three lines.

Don't Don't add dividers, boxes and shadows to create order; use spacing and type.

e.g. Trending module: five ranked compact cards, no dividers.

09

◇ Original interpretation

Editorial voice

Content is written and set like a magazine: a serif hook, short sentences, specific facts.

Why The product positions itself as a fashion magazine starring the user; the tone is inspiration-led.

Do Write specific, sentence-case headlines with numbers ('Six beaches', '₹4,120').

Don't Don't use the serif for UI, numbers or labels. Don't write clickbait teasers.

e.g. Editorial card F: kicker + serif headline + dek + byline.

10

◇ Original interpretation

Show your sources

Anything that changes or has consequences shows where it came from and when.

Why Commerce and AI surfaces fail when facts are stale or invented; public reviews also show trust is fragile when users feel out of control.

Do Bind every price to its quote; cite every rule; label every ad.

Don't Don't let a model write a price. Don't bury the off switch.

e.g. Fare card with offer-bound price; policy card with source row; deflect card.

Colour

Red means now. Lavender means you. #FF0049 and #DDBEF0 are observed via a brand registry; every other value is a reconstructed approximation, not an official Glance value.

BRAND · SIGNAL & IRIS

primary
#FF0049 ●
Brand signal. Live dots, active indicators, icons, large

primary-action
#E6003F ◇
Filled primary button with white label (passes 4.5:1).

primary-dark

THE LONG READ

Forty-eight hours in a city that wakes before you do

A slow itinerary for Varanasi: dawn on the ghats, lunch in the lanes, and the ceremony worth staying up for.

Words by Meera Rao · 9 min read

VISA & ENTRY · CITED

What changes for Indian travellers this winter

Wake Travel desk · Last verified 29 Sep 2026 · 5 min

Every entry rule in this piece links to the official page it came from. Where a rule changed in the last seven days, we say so, and we tell you to check again before you fly. Prices quoted below were checked live at 9:41 and can move until you book.

Volatile facts are fetched. Rules are cited. Nothing is left to memory.

PAIRING RULES

- 1 Serif for the hook, never for UI chrome, labels, or numbers.
- 2 One serif moment per screen. If the hero uses it, cards do not.
- 3 Numbers are Inter with tabular figures, so prices align and do not jitter.
- 4 Uppercase only for labels and kickers, tracked +8%.
- 5 On media: Inter Bold, two lines max, always over the bottom scrim.

Space, shape, elevation

A 4px base with an 8px rhythm. Radii by role. On dark, elevation is a change of tone; shadows appear only on the light theme.

SPACE

space-1	4px	
space-2	8px	
space-3	12px	
space-4	16px	
space-5	20px	
space-6	24px	
space-7	32px	
space-8	40px	
space-9	48px	
space-10	64px	
space-11	80px	
space-12	96px	

Margins 16 / 24 / 32 · gutters 12 / 16 / 24 · sections 32 / 40 / 48.

SHAPE

 0 none	 4 xs	 8 s	 12 m
 16 l	 24 xl	 32 2xl	 pill pill

Pill for anything tapped · 16 cards · 24 heroes and sheets · 0 full-bleed.

BORDERS	
TOKEN	USE
border-hairline	List separators
border-default	Inputs, outlined buttons, cards without media
border-strong	Secondary button on light theme, selected option
border-focus	Focus ring, drawn with 2px offset
border-media	Inner stroke on media so dark images hold their edge on dark ground

ELEVATION

Dark: background → surface → elevated → muted.

Light: shadow-0 to shadow-3. shadow-signal is reserved for the one floating action.

Grid and responsive layouts

Four, eight and twelve columns. The hierarchy never changes between sizes; only how many things sit side by side.

Mobile - 390

Tablet - 820

Desktop - 1440 (scaled 0.28)

CONSTRUCTION

Imagery and decoration

Imagery is the layout. Ratios are chosen by job, crops keep the focal point high, and every overlaid word has a scrim. Decoration is rare and always means something.

9:16

Full-bleed lock-screen hook, stories, vertical video
● Observed

4:5

Look cards, starring-you imagery, hero card on mobile
● Strong inference

1:1

Product thumbnails, avatars, square posts
● Strong inference

16:9

Video, news imagery, desktop hero
● Observed

3:2

Editorial story cards, travel destinations
○ Reconstruction

TREATMENT

No scrim

Bottom scrim .85

Top + bottom

Focal third

- Radius 16 for cards, 24 for heroes, 0 for full-bleed.
- 1px inner stroke at 8% white so dark images hold their edge.
- Object-position: center 35%; faces and products sit in the upper-middle third.
- Never put text on an image without scrim-bottom or scrim-top.
- Placeholder art in this package is original; replace with licensed photography.

Decorative grammar

Live pulse, iris sparkle, masks, one soft blob, contour lines. One decorative device per composition. Placeholder scenes are original and should be replaced with licensed photography.

Motion

Fast in, quick out; media leads and chrome follows; only the like springs.
All values are inferred or reconstructed; production timing is not public.

standard
cubic-bezier(.2,0,0,1)

emphasized
cubic-bezier(.3,0,0,1)

exit
cubic-bezier(.4,0,1,1)

spring
cubic-bezier(.34,1.56,.64,1)

DURATIONS		
instant	100ms	
fast	160ms	
base	240ms	
slow	360ms	
story	5000ms	

SHARED-MEDIA TRANSITION · CARD → DETAIL · 360MS EMPHASIZED

0ms

90ms

216ms

360ms

Media is the shared element: it scales from its card rect into the hero while the list dims to 40% and text fades in after 180ms.

Motion specification

Every interaction, its duration, curve and behaviour. Under reduced motion: transforms off, 160ms fades, stories paused, no pulse.

INTERACTION	DURATION	EASING	BEHAVIOUR	CLASS
button-press	100ms	standard cubic-bezier(.2,0,0,1)	Scale to .97, background to pressed token.	○ Reconstruction
chip-select	160ms	standard cubic-bezier(.2,0,0,1)	Fill cross-fades; check icon slides in 4px.	○ Reconstruction
card-hover	240ms	standard cubic-bezier(.2,0,0,1)	translateY(-2px), shadow-2 (light) or surface lift (dark); media scales 1.03.	○ Reconstruction
card-press	100ms	standard cubic-bezier(.2,0,0,1)	Scale to .98.	○ Reconstruction
like-pop	360ms	spring cubic-bezier(.34,1.56,.64,1)	Heart scales 1 → 1.25 → 1 and fills primary.	◇ Original interpretation
sheet-enter	360ms	emphasized cubic-bezier(.3,0,0,1)	Slides up from bottom, scrim fades to .48.	● Strong inference
sheet-exit	240ms	exit cubic-bezier(.4,0,1,1)	Slides down; follows the finger if dragged.	● Strong inference
modal	240ms	emphasized cubic-bezier(.3,0,0,1)	Fade + scale .96 → 1.	○ Reconstruction
carousel-snap	360ms	emphasized cubic-bezier(.3,0,0,1)	Snap to nearest card after release; momentum preserved.	● Strong inference
story-advance	5000ms	linear linear	Progress bar fills; next story cross-fades 240ms.	● Strong inference
page-push	360ms	emphasized cubic-bezier(.3,0,0,1)	New page in from right 24px + fade; old page dims.	○ Reconstruction
shared-media	360ms	emphasized cubic-bezier(.3,0,0,1)	Card media expands into the detail hero (shared element).	◇ Original interpretation
skeleton-shimmer	1400ms	linear linear	Gradient sweep left to right, loops until data arrives.	○ Reconstruction
live-pulse	1600ms	standard cubic-bezier(.2,0,0,1)	Live dot ring scales 1 → 2.2, opacity .6 → 0, loops.	◇ Original interpretation
toast	240ms	emphasized cubic-bezier(.3,0,0,1)	Rises 16px + fade; auto-dismiss after 4s.	○ Reconstruction

Buttons

One primary per view. Primary is the signal; secondary is the theme inverse; tertiary is an outline. On imagery, glass.

ICON BUTTONS

FLOATING ACTION

Glass on media

One primary per view.
If two actions compete, one becomes secondary or moves into a sheet.

Prices in labels come from data.
A button that carries a price is bound to the same quote ID as the card it sits on.

Label = verb + object.
"Plan a trip", "Book at ₹5,842", "Open official page". Never "Submit" or "OK".

Min touch target 44 × 44.
Size S (32px) is for dense desktop rows only, with 6px invisible padding.

Chips and badges

Chips filter and steer; selected is the theme inverse and iris marks inferred facets. Badges state facts: live, new, for you, verified, sponsored.

Personalised lock screen

- Search: 48px pill, 20px search icon, placeholder names what can be found.
- Fields: 52px, radius 12, 1px border; focus = 2px signal; error = 2px error + icon + text.
- Suggestions show the source of each row: query, entity, or 'Ask' (iris).
- Toggles are for preferences that apply immediately; no save button.

Tabs

Topic tabs start at For you and change content in place. Segmented controls switch between views of the same set.

CATEGORY TABS · ON BACKGROUND

For you Travel Style News Cricket Food Tech Music

CATEGORY TABS · ON MEDIA

- Active: text-primary 15/700 + 16×3 signal bar, 9px below baseline.
- Inactive: text-tertiary 15/500. Gap 22px. Scrolls; first tab is always For you.
- Segmented: for 2–3 mutually exclusive views of the same content. Selected segment = theme inverse.
- Tabs change content in place (240ms cross-fade), never navigate away.

SEGMENTED CONTROL

Flights Hotels Trips

Looks Products

Day Week Month

Navigation

Thin chrome so content can be big. The assistant sits in the centre of the bottom bar, in iris; red stays for the in-context action.

TOP BARS

Home · logo + actions

Sub-page · back + title

Media page · glass controls

CATEGORY NAVIGATION

SEARCH ENTRY

BOTTOM NAVIGATION (5 ITEMS, ASSISTANT CENTRED)

For you active

Ask active

You active

BACK NAVIGATION

Edge swipe and hardware back always work; the button is a visual affordance, not the only exit.

- Bottom bar: 84px incl. home indicator, 24px icons, 11px labels, active = text-primary + 4px signal dot above.
- The centre item is the assistant (iris). It is never red; red stays for the in-context action.
- Top bar: 56px, wordmark left, max two icons right. On media pages: 40px glass circles.
- Hide the bottom bar on detail and checkout; show a sticky action bar instead.

Carousels

Rails show breadth without height, peek at 40% and never auto-scroll.
Stories auto-advance and pause on press.

RAIL WITH PEEK (MOBILE, 390 FRAME)

HERO CAROUSEL WITH PAGE INDICATOR

STORY RINGS

STORY PROGRESS

- Snap: left edge of the next card aligns to the screen margin (16px). 360ms emphasized.
- Peek: the next card shows at least 40% so the rail reads as scrollable without an arrow.
- Gap 12px. Card widths: 240 (reco), 171 (two-up), 300 (featured). Leading margin 16, trailing 16.
- No auto-advance on rails. Stories auto-advance at 5s and pause on press.
- Desktop: arrows appear on hover at the rail edges; scroll by one viewport minus one card.

Content modules

Each module has one job: hook, explain why, rank, or group. Personalised modules name their signal in one iris line.

✦ Because you watched

3 new from creators you follow

See all

- Every module = header + content + (optional) one action. No module without a header except the hero.
- Personalised headers: sparkle + h2 + one iris sub-line naming the signal. Tap the line to open 'Why this'.
- Trending lists are ranked (serif numerals) and capped at 5; the metric that makes them trend is shown.
- Category tiles: 3:2, scrim, h3 label bottom-left. Six max per row on desktop, horizontal scroll on mobile.

Media modules

Video, stories, shoppable looks and galleries each have one control model.
Text on media always sits on a scrim.

VIDEO CARD

STORY VIEWER (9:16)

SHOPPABLE LOOK (HOTSPOTS)

GALLERY

- Video: 16:9 in feed, 9:16 full-screen. Play glyph in a 56px glass circle; progress 3px, signal fill.
- Stories: 5s per frame, hold to pause, tap edges to step, swipe down to close. Text sits on scrim-bottom.
- Hotspots: 28px ring + 14px dot; tap opens a product sheet, never navigates away from the look.
- Galleries: swipe, dots under the image, thumbnails on tablet+; zoom on pinch.

Overlays

Sheets for choices, dialogs for consequences, toasts for confirmations, tooltips for explanations.

BOTTOM SHEET

DIALOG

TOASTS

TOOLTIP · WHY THIS

SCRIM

scrim-full rgba(0,0,0,.48) behind every modal

- Sheet: radius 24 top, 36×5 grabber, max 90% height, drag to dismiss, 360ms enter / 240ms exit.
- Dialog: only for irreversible or money-changing moments. Title states the fact; primary restates the action with its value.
- Toast: 48px pill, bottom 96px above the nav, 4s, one action max. Warnings use the warning icon, never red.
- Tooltip: iris, explains personalisation or a data source. Arrow points at the thing it explains.

CARD	JOB
A · Hero	The one thing that matters now
B · Standard	Default feed unit
C · Compact	Lists, trending, results
D · Commerce	Anything purchasable, with freshness
E · Recommendation	Anything personalised, with its reason
F · Editorial	Long reads; serif headline

Ratios 4:5 people/products · 3:2 places · 16:9 video/news
3:4 recommendations. Radius 24 / 16 / 12 / 0. One A and a
most one F per screen. Hierarchy A > F > E > B/D > C.
Metadata in one line, middle dots, tabular numbers.

Card A · Large hero card

Once per screen, first position. For the single most relevant thing right now. Don't put more than 2 lines of headline or more than one CTA; don't use without a scrim.

358

FOR YOU

TRAVEL · FOR YOU

358 × 448 on mobile (4:5); 100% × 480 tablet; 720 × 405 desktop (16:9)

RADIUS
24 (0 when full-bleed on the lock screen)

PADDING
20

IMAGE RATIO
4:5 mobile, 16:9 desktop, 9:16 lock screen

TYPE
kicker label 11/600 caps · headline-media 26/700 (2 lines) · metadata 12/500

METADATA
Source · read time (or price · freshness)

ACTIONS
1 primary pill (M) + 1 glass icon button; bookmark top-right

STATES
default · pressed (scale .98) · saved (bookmark filled) · loading (skeleton) · offline (cached badge)

RESPONSIVE
Mobile: full width minus margins. Tablet: full width, 16:9. Desktop: 8 of 12 columns beside a 4-column rail.

● Observed — Full-bleed imagery with headline over it is observed on Glance's lock screen ('Impact' full-screen format) and marketing pages; scrim values and dimensions are reconstructed.

Wake · A Glance-inspired design system · v1.0

● Observed ● Strong inference ○ Reconstruction ◇ Original interpretation

27

The default unit of the feed. Don't box it in a surface; don't add buttons.

Card B · Standard content card

- DIMENSIONS**
240 wide in rails; 171 in two-up grids; media 3:2
- RADIUS**
16 on media only
- PADDING**
0 (text sits on the ground, not in a box)
- IMAGE RATIO**
3:2 (travel, editorial) or 4:5 (looks)
- TYPE**
kicker 11/600 caps tertiary · h3 17/600 (2 lines) · metadata 12/500
- METADATA**
Source · read time
- ACTIONS**
Whole card is the tap target; long-press opens the tune sheet
- STATES**
default · pressed · visited (title to text-secondary) · loading
- RESPONSIVE**
2 per row mobile grid; 3–4 per rail on tablet; 4–5 on desktop.

Strong inference — Media-on-top, text-below cards are strongly inferred from Glance's blog/newsroom and app collections; values reconstructed.

Card C · Compact content card

Trending lists, notifications, search results, 'more from'. Don't use for hero content; don't show more than 5 in a ranked list.

DIMENSIONS
full width × 72 (thumb 72 × 72)

RADIUS
12 on thumb

PADDING
0; 14px gap thumb→text

IMAGE RATIO
1:1 thumb

TYPE
body 15/600 (2 lines) · metadata 12/500 · optional kicker 10/600 caps

METADATA
Source · time ago · (rank metric)

ACTIONS
Trailing bookmark (22px) or none

STATES
default · pressed (row highlight surface) · read (title secondary)

RESPONSIVE
Stacks on mobile; two columns on desktop.

○ Reconstruction — Reconstruction based on news-list patterns in Glance's lock-screen news and trending modules.

Card D · Commerce card

Any purchasable item. Don't write the price as free text from a model; render it from the catalogue/offer API with a timestamp.

DIMENSIONS
171 × auto in a 2-up grid (image 4:5 = 171 × 214)

RADIUS
16 on image

PADDING
0; text below

IMAGE RATIO
4:5 (fashion, products on neutral ground); 1:1 for accessories

TYPE
brand caption 12/600 tertiary · name 13/500 (2 lines) · price h3 17/700 tabular · was-price 12 strike · off 12/600 success

METADATA
Store · freshness ('Price checked 9:41')

ACTIONS
Heart (32 circle, white 92%) top-right; whole card opens PDP

STATES
default · liked (heart filled signal, like-pop) · price-drop badge · out-of-stock (image 40% + 'Sold out' badge) · loading

RESPONSIVE
2 per row mobile, 4 tablet, 5–6 desktop.

① Strong inference — Product tiles with brand, name, price and a save heart are strongly inferred from Glance AI's shoppable collections (400+ brand partners); freshness line is original.

Card E · Recommendation card

Anything chosen by personalisation. Never show a recommendation without its reason; never phrase the reason as a claim about the user's identity.

240

RESPONSIVE

Rail on all sizes; 5 visible on desktop.

◇ Original interpretation — Recommendation reasons ('Because you saved...') are an original interpretation of observed personalisation claims (feeds tuned by weather, trends, occasions, saves and dwell time).

Wake · A Glance-inspired design system · v1.0

● Observed ◐ Strong inference ○ Reconstruction ◇ Original interpretation

31

Card F · Editorial / story card

Long reads, guides, curated collections. Max one per screen. Don't use the serif anywhere else on the same screen.

◇ Original interpretation — Editorial serif treatment is an original interpretation of the observed 'fashion magazine where you are the model' positioning.

Information hierarchy

Five levels, read in order. The levels hold for every content type; what fills them changes.

LEVEL 1

Visual hook

The image, video or likeness that stops the scroll.

LEVEL 2

Headline / core proposition

One sentence that stands on its own.

LEVEL 3

Supporting context

Kicker, reason line, dek, or context (weather, occasion).

LEVEL 4

Metadata

Source · time · price · freshness, one line, tabular.

LEVEL 5

Action

One primary, or the card itself as the tap target.

TYPE	L1 HOOK	L2 HEADLINE	L3 CONTEXT	L4 METADATA	L5 ACTION
Entertainment	Video frame / live moment	Title of the moment	Who, where, live count	Live badge · viewers · duration	Play / set reminder
News	Photo or 9:16 story	Stand-alone headline	2-line summary	Source · category · time ago	Read full story
Commerce	Product or look (starring you)	Product name / look title	Occasion · fit confidence	Price · was · off · price checked	Buy on store / save
Sports	Match graphic / field	Score or state ('needs 12 off 6')	Teams, venue	Live · over · time	Follow / watch
Utility	Icon + value (31°, ₹4,120)	The change ('dropped to ₹4,120')	What it affects	Source · checked HH:MM	See details
Recommendations	Media	Title	Reason line (iris)	Count · from-price	Open; tune (more / less / why)

SCANNING MODEL

Hook: image → headline → action. Feed: an F down the left edge with excursions into rails. Detail: headline → byline → first paragraph → sticky action.

Content design language

Specific, sentence-case, stand-alone. Numbers and sources in every volatile claim. Recommendation language carries its own confidence.

HEADLINES

Sentence case · one idea · ≤ 60 characters on media (two lines), ≤ 80 in lists · specific nouns and numbers ("Six beaches", "₹4,120") · must make sense with no image.

METADATA

Source · context · time. For commerce: price · was · off, then freshness. Separator " · ". Tabular numerals, ₹ with Indian grouping.

CTA LANGUAGE

Verb + object: Plan a trip · Book at ₹5,842 · See fare · Open official page · Talk to an expert.

RECOMMENDATION LANGUAGE (STRONGEST FIRST)

SIGNAL	PHRASE
User's own action	Because you saved Goa
Similar users	Popular with people like you
Similar item	Similar to Panjim
Context	For Saturday's forecast
Trend	Trending near you

Never state identity ("because you are..."); never imply surveillance ("we noticed you were at...").

URGENCY, TRENDING, SOCIAL PROOF

Only real numbers with a source: "Only 3 left" (inventory), "12.4k watching", "48k saved". No fake countdowns. "Live" only while live.

EXAMPLE · HOOK

[For you]
TRAVEL · FOR YOU
Monsoon's over. Six beaches
worth a long weekend
Wake Travel · 4 min
[Explore →]

Patterns and personalisation

Commitment rises one step at a time. Personalisation is a loop: signal, recommendation, explanation, action — and the user can always see and change the loop.

Discovery

Content consumption

Commerce

Personalisation

Entertainment

Notification

Onboarding

SITUATION	EXPLICITNESS	EXAMPLE
Own action	Explicit reason	Because you saved Goa
Likeness	Badge + delete control	Starring you
Location, weather	Context in metadata	26° forecast · Delhi
Trend	Implicit label	Trending near you

CONTROLS WITHIN ONE TAP

More like this · Less like this · Why am I seeing this · Remove inferred interest · Delete my photos · Turn off lock-screen stories.

Confidence is shown by wording, not percentages — except fit confidence in commerce (observed as a Glance feature), which states its basis.

Personalised home, three moments

The same story is the lock-screen hook, the app hero and the detail page. Personalisation is shown by what appears and named in one iris line.

Content feeds

News and entertainment share one vertical grammar; discovery is a masonry of entry points.

Recommendations, updates, you

Every recommendation carries its reason; updates carry data and time; inferred taste is visible and removable.

Screen templates

Thirteen phone templates, all composed from the component library.
Discovery, commerce, product, search, onboarding shown.

On the web

At 1440px the hero sits beside a ranked list; rails show five; side navigation replaces the bottom bar.

A travel assistant that can't make up a fare

How the system extends to the case-study product. Volatile facts are rendered from their source with a timestamp; rules are cited; when neither is possible, the assistant says so and hands off.

Alert: live fare, timestamped

Answer: fare card from the API

Rules: cite, or deflect and hand off

COMPONENT	RULE
Fare card · live	Price rendered from the fare API, bound to an offer ID. 'Live · checked 9:41' in green.
Fare card · cached	Supplier timed out: amber 'Cached 9:32', CTA becomes 'Check live price'.
Price changed	Dialog restates the new value in the primary label.
Cited answer	Answer limited to the retrieved snippet; source row with publisher and last-verified date.
Deflect + handoff	No source → say so, link the official page, offer a human.

Fetch what changes. Cite what rules. Show why.

Assistant answer cards

All states of the extension components, built from the same tokens as the rest of the system.

NO SOURCE → DEFLECT + HANDOFF

I can't confirm this one from an official source

Transit rules for this route changed recently. Rather than guess, here's the official page, or talk to a travel expert.

Open official page

Talk to an expert

CONVERSATION

Cheapest flight Delhi to Goa this Friday?

Checking live fares across 6 airlines...

RULES

- The number on a fare card is rendered from the fare API response and bound to its offer ID. The model never types a price.
- Every fare shows its freshness: 'Live · checked 9:41' (green) or 'Cached 9:32' (amber).
- Policy answers carry a source row: publisher, page, last-verified date, external link.
- No retrieved source = no answer. Deflect to the official page and offer a human.
- Changed price = dialog with the new value in the primary label; nothing is charged silently.

Accessibility

Contrast is computed from the tokens. Colour never carries meaning alone, and brand red is never an error.

PAIR	RATIO	RESULT
White on primary-action	4.73	AA
White on primary	3.93	Large text / icons only
Primary on background	4.97	AA
Text secondary on dark	9.92	AAA
Text tertiary on dark surface	4.84	AA
Text tertiary on light surface	4.95	AA
Iris on iris subtle	10.03	AAA
Success on light	5.06	AA

- 1. Text on imagery always over a scrim.
- 2. Errors, warnings, live and verified carry an icon or a word.
- 3. Error is orange-red (hue $\approx 15^\circ$) with an alert icon; brand red is hue $\approx 343^\circ$.
- 4. Targets $\geq 44 \times 44$.
- 5. Reduced motion: transforms off, 160ms fades, stories paused, no pulse.
- 6. Cards expose one link named kicker + headline + metadata (+ reason).
- 7. Focus: 2px signal ring, 2px offset, dark halo on media.
- 8. Layouts survive 200% text.
- 9. Every personalisation and likeness image can be explained, tuned and deleted.

The image is a composite of three parts. On the left, two mobile app screens are shown side-by-side. The first screen displays a beach scene with a palm tree and a person in a red cape, with the text 'Mendison's over. His beaches worth the flight' and a red button labeled 'Discover'. The second screen shows a person in a red cape with the text 'The red coat, these wings' and a red button labeled 'Discover'. On the right, a 'COLOUR SYSTEM' grid is displayed. It features a header 'Red means now. Lavender means you.' and a list of color names with corresponding swatches: Signal (red), Signal action (red), Via (lavender), Via subtle (lavender), Stage (red), Surface (red), Text 2 (red), Fresh (red), Changed (red), and Error (red). Below the grid, a note states: '##F0049 and #DCB6F0 are observed brand hues. Everything else is reconstructed around one later colour is a job, not a mood.'

SUMMARY

A wake-first, media-led language that shows you why, and shows you its sources.

Distinctive

Built for the two seconds after a screen wakes: full-bleed media, one line, one tap, the user in the picture.

Primitives

Dark stage · signal red · iris lavender · bottom scrim · Inter + Instrument Serif · pill/16/24 · 4px.

Discovery & personalisation

A tuned stream with reason-named rails; more, less and why always one tap away.

Reuse without copying

Keep the logic, change the identity: your hues, your serif, your photography, your mark.
